

# Watec® Drain KP+

- Watec® Drain KP+ is the only drainage system that should be laid directly on surface, without adhesive layer beneath.
- Stone and ceramic paving stay as good as new during all period of exploitation.
- There are no ugly stains, efflorescence of the fugues nor appearance of calcification on the surface.
- There is no cracking of the paving during the substrate movement.
- It multiplies working life of waterproofing.
- There is no cracking of the paving during the cycles of freezing and defrosting.
- Diffuse slit enable ventilation of the moisture from cement substrate.
- It enables lowering of the threshold height.
- Reinforcement mesh extends optimal strenght and adhesion.
- Can be used on surfaces with slope of only 1%.
